Silica gel is an amorphous and porous form of silicon dioxide (silica), consisting of an irregular tridimensional framework of alternating silicon and oxygen atoms with nanometer-scale voids and pores. The voids may contain water or some other liquids, or may be filled by gas or vacuum. In the latter case, the material is properly called silica xerogel. ...

Liquid crystals (LCs) are a state of matter which has properties between those of conventional liquids and those of solid crystals. For instance, a liquid crystal may flow like a liquid, but its molecules may be oriented in a crystal-like way. There are many different types of liquid-crystal phases, which can be distinguished by their different optical properties (such as textures).

Hydrogenated castor oil (HCO) is a triacylglycerol (TAG) [1, 2] and is a derivative of castor oil []. It is commonly used as lubricant and can be found in coatings, carbon paper, cosmetics, polish product, etc.

Gregg (1951, p. 63) used the term "activity of a solid" to denote chemical and physico-chemical reactivity; he wrote (1951, p. 64) that an increase in activity is usually traceable to an increase in the surface area of the powder.

intermediate between colloidal alumina and colloidal silica. The alumina coating retards the conversion of the underlying silica from amorphous to crystalline at high temperatures.

With the above advancements, it is necessary to revisit the prevailing Cu₂O crystals with tailored architectures. To date, although several previous review papers have reported the partial summaries of the progresses in facet-dependent properties of Cu₂O crystals, , , , a comprehensive summary on Cu₂O crystals is lacking and highly desirable to further promote the development of ...

Abstract. Hierarchical control of two-dimensional (2D) molecular alignment patterns over large areas is essential for designing high-functional organic materials and devices.

In 2000, fishermen reported the appearance of deformed reproductive organs in whitefish (*Coregonus* spp.) from Lake Thun, Switzerland. Despite intensive investigations, the causes of these abnormalities remain unknown. Using gene expression profiling, we sought to identify candidate genes and physiological processes possibly associated with the observed gonadal deformations, in order to gain ...

Four on-lattice and six off-lattice models for active matter are studied numerically, showing that in contact with a wall, they display universal wetting transitions between three distinctive phases.
