

### **dragonfly and damselfly pdf**

A dragonfly is an insect belonging to the order Odonata, infraorder Anisoptera (from Greek ἀνάιστος, "unequal", and πτερόν, "wing", because the hindwing is broader than the forewing). Adult dragonflies are characterized by large, multifaceted eyes, two pairs of strong, transparent wings, sometimes with coloured patches, and an elongated body.

### **Dragonfly - Wikipedia**

Odonata is an order of carnivorous insects, encompassing the dragonflies (Anisoptera) and the damselflies (Zygoptera). The Odonata form a clade, which has existed since the Triassic. Dragonflies are generally larger, and perch with their wings held out to the sides; damselflies have slender bodies, and hold their wings over the body at rest.

### **Daylilies - Subhana Ansari**

I have registered 12 daylilies for 2018; there are now 61 daylilies hybridized and named by me, Subhana Ansari (see Ansari Introductions), or click on the small photos above to go to the individual introduction's page (all of them are on the introductions page, not all the small photos are above). My hybridizing focus is patterned eyes and blue tones.
