

electroactive polymer electrochemistry part pdf

Going for gold: The mono- and di-chloroform solvates of $[\text{Au}_2(\mu\text{-}1,2\text{-bis(diphenylarsino)ethane)}_2](\text{AsF}_6)_2$ undergo single-crystal-to-single-crystal transformations that result in gain or loss of only one chloroform molecule and changes in the structure and luminescence of the digold cation.

Polymerization of Ethylene Oxide, Propylene Oxide, and

This review reports the recent advances in the most important and straightforward synthetic protocols for incorporating catechols into (bio)polymers, and discusses the emerging applications of these innovative multifunctional materials in biomedical, energy storage and environmental applications.

Recent advances in the synthesis of catechol-derived (bio

3. Biosensors. Biosensor is a sensing device that comprised of a biological entity as an important part of assembly during the analyte detection. A biosensor is comprised of two elements: (i) biological element and (ii) transducer element.

Biosensors based on electrochemical lactate detection: A

ABSTRACT. Water electrolysis is one of the simplest methods used for hydrogen production. It has the advantage of being able to produce hydrogen using only renewable energy.

Hydrogen production by alkaline water electrolysis - SciELO

The rapidly increasing population, depleting water resources, and climate change resulting in prolonged droughts and floods have rendered drinking water a competitive resource in many parts of the world. The development of cost-effective and stable materials and methods for providing the fresh water in adequate amounts is the need of the water industry.
