An embedded system is a programmed controlling and operating system with a dedicated function within a larger mechanical or electrical system, often with real-time computing constraints. It is embedded as part of a complete device often including hardware and mechanical parts. Embedded systems control many devices in common use today. Ninety-eight percent of all microprocessors are ...

LCR Embedded Systems's™ Shock-Isolated Chassis is designed for direct bulkhead mounting and provides shipboard applications with a platform that can withstand extreme shock and vibration. It has passed the Deck Simulator Shock Machine (DSSM) test thanks to its innovative shock isolation system, designed and produced by LCR Embedded Systems, and is designed to be used on multiple naval ...

An embedded database system is a database management system (DBMS) which is tightly integrated with an application software that requires access to stored data, such that the database system is "hidden" from the application's end-user and requires little or no ongoing maintenance. It is actually a broad technology category that includes database systems with differing application programming ...
